**DETAILED ACTION*****Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-37 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-33 of U.S. Patent No. 6,724,351 in view of Walker et al. (Patent No.: 4,954,970).

Claims 1,13, and 29 of this application are identical to claims 1,8 and 14 of patent# 6,724,351 except for the addition of the enablement of the overlay window.

Walker et al teach overlaying in (col.1, lines 58-60). Walker et al teach about the overlay window and enabling the window. An overlay module(mixer) is shown in Fig.4,13".

Art Unit: 2672

Therefore it would have been obvious to one ordinarily skilled in the art at the time of the invention to utilize Walker et al's teachings of an overlay window to have images displayed over the background image in the system described in the patented claims because an overlay refers to a graphic that can be displayed on top of another background layer, such as taught by Walker et al. This Overlay would allow titles and graphics to be included while video runs in the background and the benefit of it is to display more information by superimposing different types of information at the same time.

Regarding Claims 2-11, 14-27 and 30-37, the same limitations are found in the patented claims 7, 9-13 and 15-33.

In addition, regarding Claims 12 and 28, although the PIP and POP functionality hasn't been specifically mentioned in the patented claims 1, 8 and 14, Walker et al's overlay window combined with the patented claims meet this limitation.
